

Take A Closer Look...

S2X Science Class: Abercorn Secondary School

Multi Photo Reportage 11-14 years

The pupils of Abercorn Secondary School have been involved this year in environmental projects with GU, SEPA, EPS, GSC, KSB and Dandelion. They've worked on projects using virtual reality, and they've conducted experiments relating to sustainability, weather, climate change and air pollution. The photos they are submitting were taken spontaneously during a litter pick around our school. The vibrant life the class unexpectedly found among the depressing debris empowered them.

The projects throughout the year, have given the children knowledge and an understanding that they can improve their environment and so, their future. Most importantly, they have learned that nature can, endure.

The pupils of the 2X science class have demonstrated and developed a close relationship with our school's locality and learned that they can make a difference.
